EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ryan Miller on August 4, 2005.

The application has been amended as follows:

Claim 15 (Currently Amended): A fastening device for at least one disc shaped data carrier in a cassette, said disc shaped data carrier comprising a central opening, wherein the cassette comprises a middle part on which a crown of tongues with noses for fastening the data carriers is provided, the crown of tongues is elastically insertable into the central opening of the at least one data carrier, wherein there is provided at least one connecting element movably connecting at least two of the tongues with noses, wherein the connecting element [is produced in the production of the fastening device in a first position, and wherein after the production for increasing the restoring force of the tongues against the data carrier the connecting element is moved into a second position] is movable from an as produced first position to a second position, the second position providing an increase in the restoring force of the tongues against the

Art Unit: 3728

data carrier as compared to the restoring force provided in the first position, wherein each of the tongues [comprise] comprises an [at least one] axial arm extending through the central opening of the at least one data carrier and wherein the at least one connecting element is attached to the axial arms [connecting the axial arms substantially on ends pointing towards the direction of removal of the data carrier].

Cancel claim 26.

The following is an examiner's statement of reasons for allowance: The prior art did not disclose a connecting element being movable from an as produced first position to a second position, the second position providing an increase in the restoring force of the tongues against the data carrier as compared to the restoring force provided in the first position. The prior art discloses a connecting element being movable from an as produced first position to a second position, the second position providing an *decrease* in the restoring force of the tongues against the data carrier as compared to the restoring force provided in the first position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
